

ABIGAIL GATHONI MURIGI

Junior Software Developer / Frontend Specialist

Nairobi, Kenya | abigailmurigi01@gmail.com | github.com/abbie-software | linkedin.com/in/abigail-gathoni

PROFESSIONAL SUMMARY

An aspiring and detail-oriented Software Developer with hands-on experience building full-stack web applications and managing relational databases. Proficient in frontend frameworks including React and Angular, with backend exposure through Java and PHP. Adept at working in Linux (Ubuntu) environments, utilizing containerization (Docker), and managing version control via Git/GitHub. Passionate about solving real-world problems through clean code and modern development workflows, with a commitment to continuous learning and collaboration.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL (MySQL), HTML5, CSS3

Frameworks & Tools: React, Next.js, Angular, Vite, Spring Boot

Environments & Dev: Linux (Ubuntu), Docker, Git/GitHub, VS Code, Cursor AI

Core Competencies: Full-Stack Web Development, Relational Database Design, Responsive UI Design, API Testing, Component-Based Architecture

PROJECTS

ZiwaClear - Biomass Marketplace Platform *React · TypeScript · Vite · Leaflet · Supabase*

ziwa-clear.vercel.app

- Served as Frontend Lead in a hackathon team building a marketplace platform connecting biomass harvesters with biogas and fertilizer producers, addressing Lake Victoria's water hyacinth crisis; placed 2nd at the AYSC Hackathon.
- Architected the buyer-facing dashboard with an interactive Leaflet map, real-time batch listings, and bidirectional selection sync between map pins and sidebar cards, backed by React Query for live data polling.
- Implemented client-side routing, a persisted dark/light theme system using React Context, and an AI chat assistant widget with simulated streaming responses.

E-Commerce Coffee Shop Platform

React · Vite · Vercel

github.com/abbie-software

- Built a fully responsive, modern frontend web application featuring state management for dynamic menu selection and cart functionality.
- Refactored original static HTML architecture into a modular, component-based React framework, dramatically increasing code reusability and UI rendering performance.
- Configured automated continuous deployment (CD) pipelines leveraging Vercel and GitHub Pages, enabling zero-downtime releases.

Greenfield Institute - Student Login System

PHP · MySQL · Apache

- Designed and implemented a secure backend authentication system for a student management portal, including session handling and input validation.
- Developed normalized MySQL database schemas to efficiently handle user credentials and student baseline profiles.
- Configured and managed local Apache/PHP environments, successfully troubleshooting complex runtime and database connectivity errors.

Hospital Management Database System

Microsoft Access · SQL

- Engineered a relational database structure to streamline administrative record-keeping for patients, doctors, and appointments.
- Defined strict multi-table relationships to maintain absolute data integrity and prevent record duplication across the system.

EDUCATION

BSc in Mathematics and Computer Science

2024 - 2028

Jomo Kenyatta University of Science and Technology (JKUST) — Nairobi, Kenya

- Relevant Coursework: Internet Application Programming, Operating Systems, Object-Oriented Programming, Database Management Systems, Data Structures & Algorithms, Probability & Statistics, Abstract Algebra.

ACTIVITIES & ACHIEVEMENTS

Hackathon Participant

Competitive Events

- Collaborated with cross-functional teams to ideate, design, and ship working solutions under time pressure, strengthening rapid prototyping and teamwork skills.

Tech Workshops Attendee

Continuous Learning

- Attended multiple technical workshops covering modern web development, best practices, and emerging technologies in the software industry.
- Actively growing through peer collaboration, open source exploration, and community involvement in the Nairobi tech ecosystem.
